

Nail that color.

[even on textured or uneven surfaces]

By accurately detecting color on a wide variety of surfaces, CS24D color sensors distinguish between objects with greater accuracy than any other color sensors. The CS24D sees large areas illuminated by 24 ultra-bright LEDs, instead of depending on the reflected light from one white LED. The setup wizard in our ColorSense software makes quick work of differentiating similar colors. Just point and save to teach it up to 15 colors. Get a grip on color at colorsensors.com
