

What is your machine's true potential?

A machine's true productivity is often hidden by poorly controlled motion. It's especially true with hydraulics, where power and flexibility are inherent, but precision motion control is needed to realize the benefits. But now it's easy to tap that potential. Just position a Delta RMC motion controller into the system.

"We estimate savings in excess of \$200,000 per year from our new debarker using Delta's RMC motion controller. And, the ability to smooth out knots and flares before sawing gave us a 5% productivity bonus."

- Kevin Mueller

Mueller Brothers Timber, Inc.

Precise position/pressure control reduces waste, improves quality, and cuts costs.

Mueller Brothers Timber, a high-grade lumber manufacturer in Missouri, saw the new hydraulically-powered debarker they built pay for itself in just a few months on raw material savings alone. They found more value by using the RMC's pressure control to increase the quality of the debarked logs. And, the reduced shock and vibration of smooth motion is expected to reduce maintenance costs and extend machine life. **Delta makes complex motion easy to set up, program, diagnose, and optimize.** Get started online. Dig into a case study about your industry or application. Buzz through technical info and detailed product specs. Let Delta RMC Motion Controllers bring out the true potential of your machines. **Call us today.**
