

Squeeze more out of your machines.

Squeezing higher performance out of existing machinery was a guessing game. But now it's easy to upgrade performance, especially for hydraulic machines with "open loop" controllers. Just insert a Delta RMC motion controller. Precise closed-loop motion control keeps machines operating consistently cycle to cycle.

"After upgrading this plastics molding machine with Delta's RMC motion controller, cycle time variances dropped from 7 seconds to .05 second. Quality improved 10%. Machine downtime was slashed from 10% to 1%."

Max Houser

DeKalb Molded Plastics

Plugging in a new motion controller maximizes ROI on existing equipment. DeKalb Molded Plastics, Indiana, made enormous productivity and quality improvements at a low retrofit cost by injecting a Delta RMC motion controller between existing transducers and the existing controller/HMI. **Precise position and pressure control reduces costs and boosts productivity.** Smooth motion reduces shock and vibration, extending uptime and machine life. **Delta makes complex motion easy to set up, program, diagnose, and optimize.** Find case studies for a wide variety of industries and applications, technical info, and complete Delta RMC product specifications conveniently online. So why not put a smile on your own performance? It's easy. **Call us today.**
