

We call it math. You'll call it magic.

Tuning closed-loop motion was once a frustrating trial-and-error process. Now optimizing complex industrial machinery takes just a few simple movements.

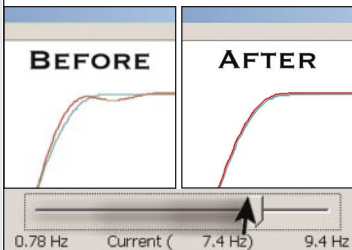

Tuning Wizard - Axis0

1. Select the desired system responsiveness:

First, slide a Delta Motion Controller into your machine. Then use Delta's Tuning Wizard software to optimize both electric and fluid power motion.

Precise closed-loop control boosts machine productivity and part quality.

Plots show actual (red) vs. target (blue) motion profiles. The Tuning Wizard's slider bar allows you to get actual motion on target more accurately and in much less time.

It's not an illusion—the Tuning Wizard makes the complex math invisible. Motion errors vanish as well, freeing you to concentrate on your big picture. Best of all, your machine's increased productivity is revealed, as if by magic. **Get details at our website, or call now for a demo, and see it with your own eyes.**
