

FOR IMMEDIATE RELEASE

Delta Motion Controllers add Feedback Switching

March 25, 2013 – Battle Ground, WA – Delta Computer Systems, Inc. announces the addition of feedback switching to Delta's RMC75 and RMC150 Motion Controllers.

Feedback switching is especially useful when a wide measurement range necessitates multiple sensors in order to get the needed resolution within various ranges. The RMC motion controller can switch between feedback sensors "on the fly" in both position and pressure control applications. Axes defined for feedback switching use a variable rather than a physical input, allowing flexibility in assigning feedback inputs.

Example applications include testing pressure over several different ranges in the Oil and Gas industry, and load cell testing of weigh scales in the Aerospace and Automotive industries. For details on feedback switching and other Custom Feedback features plus examples, download RMCTools from Delta's website, www.deltamotion.com/downloads and visit the Delta Discussion Forum at <http://forum.deltamotion.com/>

Delta's RMC handles multiple sensors with feedback switching for wide range testing

"Delta constantly strives to add new capabilities to the RMC product line in response to customers' requests and needs." stated Steve Nylund, Delta's CEO. "Feedback switching is part of a larger Custom Feedback feature set in RMCTools that enables more flexibility, reliability and precision allowing customers to more easily meet their core test or production goals." Nylund added.

The high performance motion control products that Delta designs, manufactures and markets are used worldwide for hydraulic, pneumatic and electric closed-loop control in a wide array of single and multi-axis applications, including testing, food, energy, automotive, entertainment, plastics, materials, aerospace, metals, forest products and others.

About Delta Computer Systems: For 30 years, Delta has supplied motion controllers, color sensors, and other industrial products that enable OEMs & integrators to build better machines.
